

If you're self-employed and qualify for a grant the easiest way to calculate what you'll get if you have filed three years tax returns is to add up the total net profit for the three years and divide by 15. That will give you the amount of the grant you will get.

If you have only filed two tax returns add them up and divide by 10.

If you have filed one tax return divide by 5.

Always remember the maximum grant per month is £2,500 a month. So for three months you won't get any more than £7,500.
